1. How to use ClickShare device

ClickShare is a device you'll find in **conference rooms**. It allows you to wirelessly share your screen to a TV in the conference room.

ClickShare is a device that you will find in the conference rooms with instructions. With it, you can share your computer screen to one TV.

If, after plugging the device into the laptop, you get a message as in the picture, select **Don't encrypt this drive**.

If the connected device starts blinking, launch **File Explorer** or My Computer (on the desktop you will find a shortcut that is the computer name LPNBXXXX) and double-click it.

A folder will open in which you need to install the device driver. We do this by double-clicking **Clickshare for Windows** for DELL laptops or **Clickshare for Mac** for Apple laptops. Then just press the physical button on the device and the TV will start displaying our screen. When pressed again, the screen sharing will end. Please put the devices back in their place.
